

NIGHT-BLOOMING TROPICAL WATER LILY

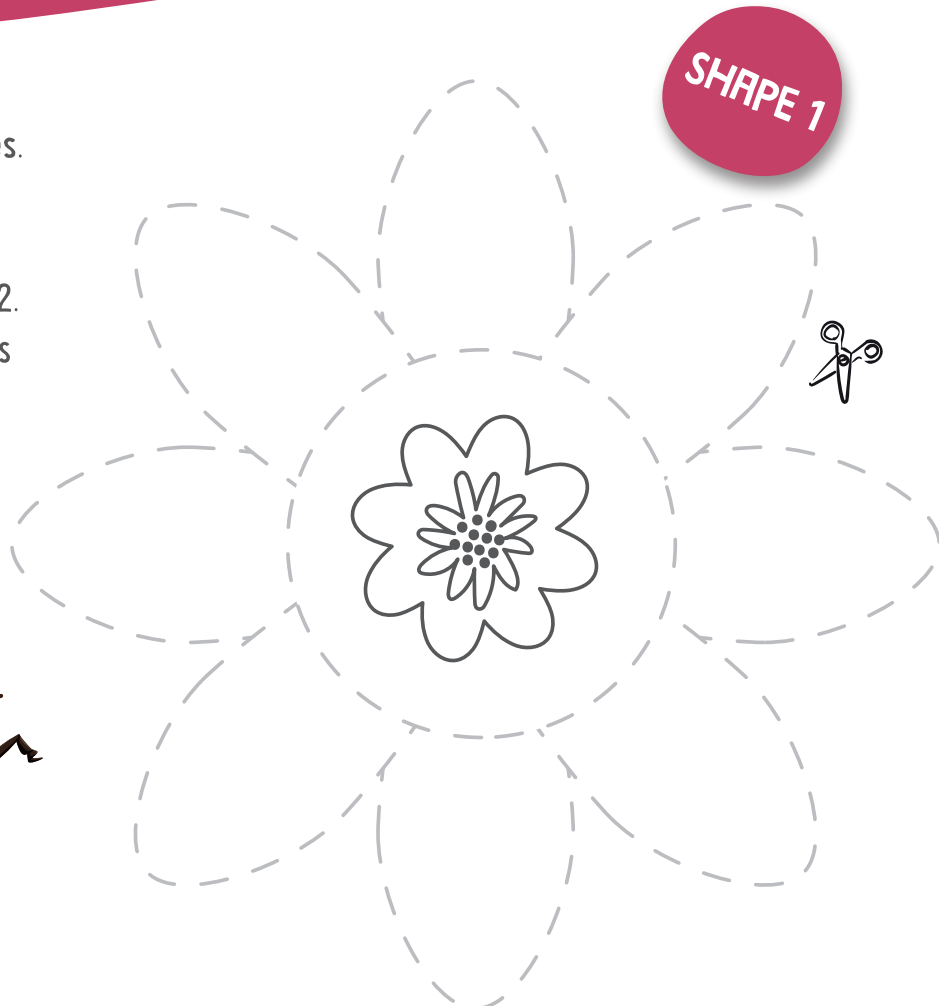

Make a wonderful water lily that opens in water.

This flower is pollinated by beetles. In the daytime these stay hidden inside the closed flower. If you want, cut out the beetle and hide it inside your flower before placing it on water!

YOU WILL NEED:

- Colouring pencils or crayons
- A pair of scissors
- A bowl or basin of water

1. Colour and cut out both lily shapes.
2. Fold all the petals on shape 1 into the centre.
3. Place this in the centre of shape 2.
4. Fold the petals of shape 2 inwards so they are closed over shape 1.
5. Now place it on the surface of water and watch it slowly open...
