

Draw-a-saurus Tyrannosaurus rex

Lightly sketch step 1, then add the new coloured lines from step 2 on top of step 1. Keep adding the new lines from each step until you reach step 8. Draw firmly over your final lines then colour your dinosaur.

of Earth Sciences

Fact file:
Name: Tyrannosaurus rex
Pronounced: tie-RAN-oh-sore-us rex
Meaning of name: King of the tyrant lizards
Length: 12 metres
Diet: Carnivorous
When it lived: Late Cretaceous (67-65 million years ago)

Tyrannosaurus rex was one of the most fearsome animals of all time. Its powerful jaw had 60 teeth, some up to 20cm long.

The *T. rex* skull by the shop, is a replica of a fossil called Stan, named after Stan Sacrison who discovered it. If you look closely you can see there is a hole on the top left jaw and a missing piece of skull at the back. The size and shape of these holes suggest another *T. rex* bit Stan, but because it had started to heal, Stan must have lived to tell the tale.
