

# Science at Home: Mapping Worlds

The Whipple Museum has a large collection of globes from different times and places. Some of them are of the Earth, like this one which you can colour in - what countries can you see on it? Other globes in the collection are of the moon, different planets or the night sky with all the stars. You can explore the globes collection at <https://www.whipplemuseum.cam.ac.uk/explore-whipple-collections/globes>. Can you design some more globes (of real planets or imaginary ones) below?
