Stone Age to Iron Age
from the
Museum of Archaeology and Anthropology, Cambridge
Palaeolithic (or Old Stone Age)

- Ice age with snow and tundra
- Hunters hunt mammoth and reindeer
- People make large hand axes from flint and stone and spears from wood
- They live in groups in portable shelters or caves
Mesolithic (or Middle Stone Age)

Weather gets milder and woodland appears

Hunter-gatherers hunt deer and wild pigs, catch fish and gather nuts and berries

People make smaller portable flint axes and flint microliths as well as wooden spears and fishing hooks

They live in portable shelters
Neolithic (or New Stone Age)

People clear woodland to plant crops and graze cattle, sheep and goats

They stay in one place longer, build bigger houses and bury their dead in chambered tombs

Some build large monuments like Stonehenge

People make pottery for the first time

Flint and stone axes are often polished smooth. Some become symbols of status and power
Bronze Age

Farming continues

People use copper and bronze for the first time. Flint and stone is still used for arrowheads and small tools.

A new type of pottery called the Beaker appears.

The dead are buried in round barrows.

Powerful groups emerge and the use of bronze weapons increases.
Iron Age

- Farming continues on a much bigger scale
- Iron Age people begin trading with the Romans
- People live in bigger groups called tribes; some live in large protected hillforts
- The dead are buried in graves
- Iron is used for the first time and craftsmen make beautiful jewellery
